

# Sophisticated video surveillance.

Video management that allows you to have “eyes” in many places.

A comprehensive security management plan that includes a sophisticated video surveillance system, allowing you to have “eyes” in many places without having a physical presence.

With Iverify CCTV you can eliminate manned positions (to more productive locations) while monitoring high threat areas with video surveillance and access control. Iverify offers an integrated video management solution suitable for small and large applications.

**Additional Iverify Services:**

- Video Verification
- Interactive Video Response
- Intrusion Protection
- Fire Protection
- Business Intelligence

**Iverify**<sup>™</sup>  
“This is security.”

Seamlessly integrate video, intrusion and building management functions together with an access control system to secure your facility. Video allows you to “see” a situation and prevent it before it happens, or even better yet, deter the event all together.

**Other benefits include:**

- Reduce costly false alarms with alarm verification
  - Deter unwanted activity
  - Upgrade at your own pace, eliminating the need for a complete, expensive overhaul of your CCTV network, therefore maintaining budget requirements
  - Detect suspicious behaviors with intelligent video, prompting immediate alarms and induce an instant response from security personnel
- Optimize network space by storing camera activity and forwarding it at a more convenient time freeing up your LAN/WAN during the busy work day, when the network demands are exhausted with constant communications
